One of the more interesting VDSLR-related sidebar stories has been the "rediscovery" of manual-focus lenses among VDSLR shooters. Most manufacturers long ago pulled the plug on manual focus lens R&D in order to concentrate their energies into improving AF technologies. And then video came along and lo and behold, all of these AF speed queens turned out to be less than ideal, not to mention too ...

The older manual focus lenses lack these electronic contacts and processors, and have very limited information exchange with the camera body. These are called “non-CPU” lenses. One piece of information that is required for the camera to provide exposure metering is the aperture value set on the lens.

Using Manual Focus Lenses on Nikon DSLR Cameras

Manual focus has a bad rap because it's slower than autofocus. I don't perceive that this always has to be a negative thing. Slowing down can help you see more and to think more about what you are doing. Using a manual focus lens can encourage you to become more engrossed in your photography.
