Triage is a concept that dates back to the Napoleonic Wars. It is the process by which the stability of patients is determined, allowing those that are the most unstable to receive an examination, the implementation of essential treatment and further investigations as soon as possible. Well-executed triage should allow the rapid 'processing' and initial assessment of multiple casualties to ...

Check your cat's temperature for fever. Use a rectal thermometer to check your cat's temperature. However, if she gets distressed it is best to stop and leave this to your veterinarian. 99.5 to 102.5 degrees Fahrenheit is a normal temperature range, while anything over 102.5 is regarded as raised, and over 103 is feverish. Take your cat to the vet if it has a fever.
