The intensive care unit (ICU) is a common source of high-acuity nephrology consultations. Although advanced chronic kidney disease is associated with increased ICU mortality, the prognosis of acute kidney injury (AKI) requiring renal replacement therapy is far worse, with short-term mortality rates that often exceed 50%. As such, it is essential that practicing nephrologists be comfortable ...

Nephrologists may feel limited in their ability to participate in goals-of-care discussions because AKI in critical illness is often secondary to a nonrenal process. Likewise, nephrologists may not feel justified in limiting RRT because despite the poor overall prognosis of AKI-RRT, many survivors report that in retrospect they would still have opted to undergo dialysis despite reductions in QoL.
