LoadRunner Introduction. LoadRunner's purpose is to calculate "flux" or "loads" of dissolved elements, carried in streams and rivers. This could be for a single USGS water testing site, or for an entire watershed. The element could be a single USGS constituent code, or a list of codes that measure the 'same' quantity by different means.

VuGen Controller and Analysis. As I have written earlier, the three main parts of LoadRunner are VuGen, Controller and Analysis. HP user guides, which comes with LoadRunner installation, have very nicely explained the basics of these three parts. I think, I wouldn't do any justice to the introduction writing my own when it is already explained.
